Verkefni 2

Skiladagur: 20 september 2021

1. (15%) Þríhyrningurinn ΔABC er jafnarma. Hve stórt er hornið B ?

Jafnarma = A og B jafnstór

$$A = B = 26.5^\circ$$

2. (15%) Reglulegur marghyrningur hefur hornasumma 1440° .

Hvaða marghyrningur er þetta?

n merkir fjölda horna marghyrningsins

$$(n-2) \cdot 180^\circ = \text{hornasumma } n\text{-hyrnings}$$

$$\frac{(n-2) \cdot 180^\circ}{180^\circ} = \frac{1440^\circ}{180^\circ}$$

$$n-2 = 8$$

$$n = 8+2$$

$$n = 10 \quad 10\text{-hyrningur}$$

3. (10%) Hve stórt er hvert horn í marghyrningnum í spurningu 2?

$$1440^\circ / 10 = 144^\circ$$

4. (30%) Í $\triangle ABC$ er $A = 32^\circ$ og $B = 102^\circ$.

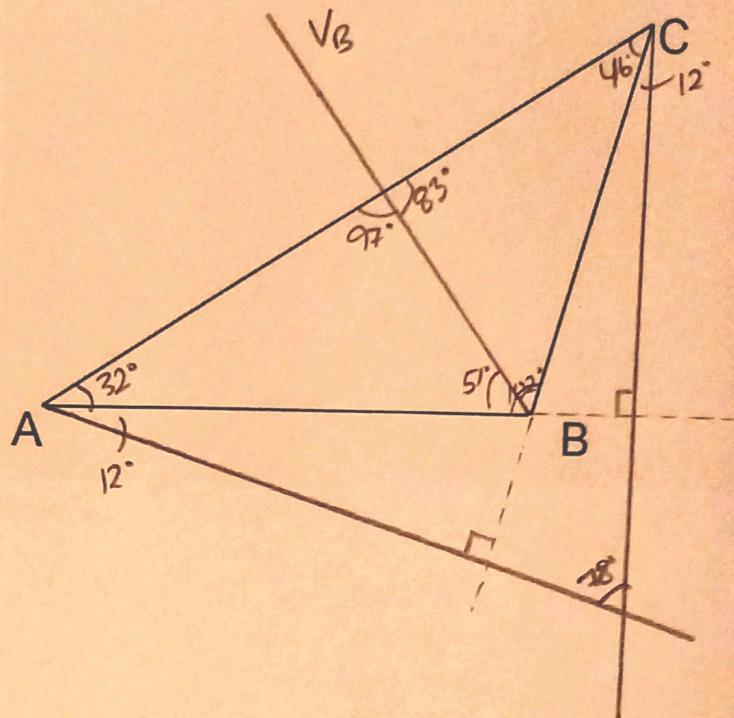

a) Teiknaðu ha og hc og reiknaðu hornið á milli þeirra.

$$180^\circ - 32^\circ - 102^\circ = 46^\circ$$

$$180^\circ - 32^\circ - 90^\circ - 46^\circ = 12^\circ$$

$$180^\circ - 46^\circ - 90^\circ - 32^\circ = 12^\circ$$

20). $180^\circ - 32^\circ - 12^\circ - 46^\circ - 12^\circ = 78^\circ$

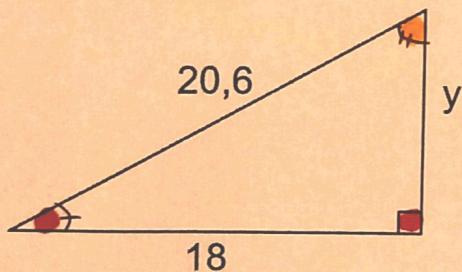

b) Finndu hornið milli V_B og b.

10). $180^\circ - 32^\circ - 51^\circ = 97^\circ$

5. (30%) Finndu

lengdirnar á

a) x-inu

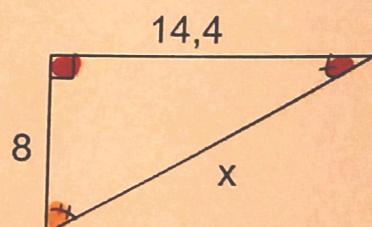

$$\frac{x}{20,6} = \frac{14,4}{18}$$

$$x = \frac{14,4 \cdot 20,6}{18}$$

15). $x = 116,48$

b) y-inu

$$\frac{8}{y} = \frac{14,4}{18}$$

$$\frac{y \cdot 14,4}{14,4} = \frac{8 \cdot 18}{14,4}$$

$$y = 10$$
